Final Reflection

- (300 Words) There is no word limit, but we suggest to keep this to one page.
- You should propose and justify a mark for yourself based on your experience with the course and with working on you Group Project. Note that your mark suggestion is just a suggestion and the tutors and I will make the final decision. You must follow the marking rubric of the course available at <https://uoel.el.github.io/qml/assessments.html#feedback-and-marking>.

Group Project (Links)

- Link to Violet's Comparative Analysis Paper - Github
- Link to Workshop based on Model (Bayesian Hierarchical Logistic Regression)
- Link to our results
- Link to our Code
- Include your Group Project output or a link to it here.
- If the output requires an explanation, but the output itself resides somewhere else and you are including a link, you can add the explanation here (for example, this is helpful when you video/audio recorded your output and you need to describe what you have done).

- If unsure how to include your output, post a question on Piazza.
